

Our firm, since forty years in the electrical winding sector, makes oneself known for the quality of own products and for the seriousness in customer's relations. Our work's group, at the second generation in the management, is composed from 35 people and we offer to the customers the best solutions at the best commercial conditions, for this we use the modernest equipments in every production's phase.

- For linear windings we use Marsilli machines at four axis complete of programmable tinning
- For toroidal windings we use Ruff machines of ultimate generation
- For the tinning we use Marsilli and Kinomat machines at programmable axis
- For the transformer core plate we use Grau, IMP and Vecchio machines and a new plasma welding machines
- For the potting we use Sealant machines at programmable axis
- For the stamping we use laser EV and Domino ink
- For the test we use Voltech and HP instruments

The products, other at intermediate test, are tested at 100 % to assure the quality, for this we have obtained the KEMA and UL marks for a complete range from 1 through 6 VA. We propose this product's list but we can make also products on request.
